

DEPARTMENT OF ELECTRICAL AND COMPUTER ENGINEERING

Electrical Power and Machines Engineering Program

Mission

The Department of Electrical and Computer Engineering offers a Bachelor of Engineering in Electrical Power and Machines Engineering (EPME). The EPME program focuses on both the theoretical and practical aspects of power engineering by addressing the fundamental concepts of engineering mathematics, physical sciences, electrical machines, power electronic circuits, electrical power system analysis, and high voltage engineering. The department plays a vital role in providing Lebanon and the region with qualified electrical power engineers. The department also offers Master and Ph.D. degrees in electrical power engineering to cater for working professionals in electrical power companies, utilities, manufacturing establishments and the energy sector in Lebanon.

Objectives

The educational objectives of the program are determined to support career advancement of the graduates and as they pursue their career goals, the graduates will:

1. Advance in engineering careers involving the design, optimization, and implementation of electrical systems, take innovative entrepreneurial ventures, and /or successfully pursue an advanced degree.
2. Acquire new knowledge and adapt to emerging technologies.
3. Assume leadership roles in multidisciplinary teams and promote sustainable eco-solutions in contemporary issues.
4. Communicate effectively and demonstrate ethical and professional behavior in a multicultural work environment.

Learning Outcomes

Upon completion of the program graduates shall have:

- a. An ability to apply knowledge of mathematics, science, and engineering.
- b. An ability to design and conduct experiments, as well as to analyze and interpret data.
- c. An ability to design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability.
- d. An ability to function on multi-disciplinary teams.
- e. An ability to identify, formulate, and solve engineering problems.
- f. An understanding of professional and ethical responsibility.
- g. An ability to communicate effectively.
- h. The broad education necessary to understand the impact of engineering solutions in a global, economic, environmental, and societal context.
- i. A recognition of the need for, and an ability to engage in life-long learning.
- j. A knowledge of contemporary issues.
- k. An ability to use the techniques, skills, and modern engineering tools necessary for engineering practice.

Degree Requirements

The undergraduate curriculum for the degree of Bachelor of Engineering in Electrical Power and Machines Engineering consists of 150 credit-hours of course work + ICDL, where the standard duration of study is 10 semesters.

Career Opportunities

Electrical power engineers are involved in a wide variety of technology ranging from huge global positioning systems that can pinpoint the location of a moving vehicle to gigantic electrical power generators. These engineers are responsible for designing, developing, testing as well supervising the production of electrical and

electronic equipment and machinery. Electric motors, controls of machinery, lights and wiring in building complexes, vehicles, aircrafts, power generations, control and transmission devices used by electric utilities are all examples of equipment built by these engineers. Electrical power engineers may choose to specialize in various areas like power generation, transmission and distribution, manufacture of electrical equipment or one particular specialty within these areas. These engineers are involved in designing new products, writing requirements for their performance, as well as developing maintenance schedules and charts. Testing equipment and machinery, solving operations problems, estimating time and cost of electrical and electronic products also come under their job.

Program Overview

The **Student's Study Plan** is given to every EPME student upon his/her enrollment. The EPME curriculum consists of the following components:

I. Common Requirements		Credits
General Education Requirements		20
Basic Sciences and Mathematics		26
General Engineering Topics		9
II. EPME Program-Specific Requirements		Credits
A.	Engineering Topics from Outside the Major	20
B.	Electrical Power and Machines Engineering Core	58
C.	Electrical Power and Machines Engineering Technical Electives	12
D.	Final Year Project	4
E.	Internship	1

I. Common Requirements

The list of the common requirement courses and their descriptions are presented in the introductory pages of the Faculty of Engineering section in this catalog. In particular, the EPME curriculum includes 9 credits offered as general engineering topics. These courses are listed in the table below.

Code	Name	Crs.
MCHE 213	Dynamics	3
COMP 208	Programming I	3
INME 221	Engineering Economy	3

II. EPME Program-Specific Requirements

A. *Engineering topics from outside the major*

This part of the EPME curriculum includes 20 credits offered by other engineering programs. These courses are listed in the table below.

Code	Name	Crs.	Pre-/Co-requisites
ENGR 002	Introduction to Engineering	2	
ENGR 003	Engineering Project Management	3	Pre: ENGL 300
COME 214	Electric Circuits II	3	Pre: POWE 212
COME 212L	Electric Circuits Lab	1	Co: COME 214
COME 221	Electronic Circuits I	3	Pre: POWE 212
COME 221L	Electronic Circuits I Lab	1	Co: COME 221
COMP 225	Digital Systems I	3	
COMP 326	Intro. to Microprocessor with Applications	3	Pre: COMP 225
COMP 326L	Intro. to Microprocessor with Applications Lab	1	Co: COMP 326

Description of this group of courses is given below:

ENGR 002 INTRODUCTION TO ENGINEERING (2Crs.: 2Lec.): Introducing the student to the engineering profession in general and the learning objectives that new students should attain, as aligned with the ABET requirements. Covering the basics of the engineering profession and engineering ethics. Introduction to the different engineering majors and to the learning objectives as specified by ABET. Insight into different engineering courses that are not technical in nature (e.g., engineering economy)
Engineering design tasks that allow the student to start thinking as engineers: problem definition, specification of constraints, investigation of different solution alternatives, implementation of best solution, writing technical reports. Fundamental tools and numerical software used in engineering. The tools and software covered could be generic or specific to a major.

ENGR 003 ENGINEERING PROJECT MANAGEMENT (3 Crs.: 3 Lec): The course covers the characteristics, techniques and challenges associated with initiating, planning, executing, controlling and closure of projects. Project management skills are discussed as they apply to projects, with special focus on leadership, teaming, and coordinating individual and group efforts. MS Project is introduced to provide hands-on practical skills with building a project plan, scheduling tasks, assigning resources, managing dependencies, monitoring progress and costs, keeping projects on track, and communicating project data through Gantt charts. **Pre-req.: ENGL 300.**

COME 214 ELECTRIC CIRCUITS II (3 Crs.: 3 Lec): Transient analysis, Laplace transform and its application to circuit analysis, two-port networks, frequency selective passive and active circuits. **Pre-req.: POWE 212.**

COME 212L ELECTRIC CIRCUITS LAB (1 Cr.: 2 Lab): This lab serves the COME 212 course. **Co-req.: COME 214.**

COME 221 ELECTRONIC CIRCUITS I (3 Crs.: 3 Lec): Introduction to semiconductor physics, junction diodes: construction, I-V characteristics, circuit models, applications, special purpose diodes: Zener diodes. Bipolar junction transistors (BJT) and field effect transistors (FET): types, physical structures, basic configurations, characteristic curves, circuit models, biasing circuits, small-signal amplifiers. **Pre-req.: POWE 212.**

COME 221L ELECTRONIC CIRCUITS I LAB (1 Cr.: 2 Lab): This lab serves the COME 221 course. **Co-req.: COME 221.**

COMP 225 DIGITAL SYSTEMS I (3 Crs.: 2 Lec, 2 Lab): Number systems and coding, Binary systems. Conversion from decimal to other bases. BCD numbers. Boolean algebra. Logic gates. Function minimization, Tabular method, Karnaugh mapping. Arithmetic functions and circuits designs (HA, FA, and ALU). Combinational functions and circuits design (decoder, encoder, multiplexer and de-multiplexer). Sequential circuits definitions and designs (Latches, RS-FF, D-FF, JK-FF, T-FF). Several laboratory experiments will be based on the simple logic gates.

COMP 326 INTRODUCTION TO MICROPROCESSOR WITH APPLICATIONS (3 Crs.: 3 Lec): An introduction to basic computer organizations, design and implementation of a simple computer; microprocessor instruction sets; assembly and machine languages. Detailed study of a particular microcomputer architecture and instruction set; assembly language programming and techniques; I/O port design; interrupt control systems; parallel and serial interfaces; the design of various types of digital as well as analog interfaces. Laboratory provides practical hands-on experience with microprocessor and/or micro-controllers software application and interfacing techniques. **Pre-req.: COMP 225.**

COMP 326L INTRODUCTION TO MICROPROCESSOR WITH APPLICATIONS LAB (1 Cr.: 2 Lab): This lab serves the COMP 326 course. **Co-req.: COMP 326.**

B. Electrical Power and Machines Engineering Core

The Electrical Power and Machines Engineering core courses are listed in the table below.

Course	Title	Credits	Pre-/Co-requisites
POWE 212	Electric Circuits I	3	
POWE 271	Electromagnetic Fundamentals	3	Pre: PHYS 281
POWE 342	Control Systems I	3	Pre: MATH 283, COME 214
POWE 342L	Control Systems Lab	1	Co: POWE 342
POWE 324	Electrical Power Systems	3	Pre: POWE 271
POWE 324L	Electrical Power Systems Lab	1	Co: POWE 324
POWE 344	Instrumentation and Measurement	3	Pre: MATH 381, COME 221
POWE 445	Control Systems II	3	Pre: POWE 342
POWE 435	Electric Machinery I	3	Pre: POWE 271
POWE 435L	Electric Machinery I Lab	1	Co: POWE 435

POWE 423	Electrical Power System Analysis	3	Pre: MATH 284, POWE 324
POWE 433	Power Electronic Circuits I	3	Pre: COME 221
POWE 433L	Power Electronic Circuits Lab	1	Co: POWE 433
POWE 436	Electric Machinery II	3	Pre: POWE 435
POWE 436L	Electric Machinery II Lab	1	Co: POWE 436
POWE 420	Electrical Power System Protection	3	Pre: POWE 423
POWE 420L	Electrical Power System Protection Lab	1	Co: POWE 420
POWE 434	Power Electronic Circuits II	3	Pre: POWE 433
POWE 500	Research Methodology	2	Pre: ENGL 300
POWE 543	Industrial Automation	3	Pre: COMP 208, POWE 344
POWE 543L	Industrial Automation Lab	1	Co: POWE 543
POWE 531	Electric Drives	3	Pre: POWE 434
POWE 531L	Electric Drives Lab	1	Co: POWE 531
POWE 528	Electrical Power Generation	3	Pre: POWE 436
POWE 526	Introduction to Renewable Energy	3	Pre: POWE 436, POWE 434

Description of Core Courses

POWE 212 ELECTRIC CIRCUITS I (3 Crs: 3 Lec): Circuit variables: voltage, current, power, and energy. Circuit elements: resistors, inductors, capacitors, voltage sources, and current sources. Circuit reduction techniques: series and parallel resistors and delta-to-wye transformation. Ohm's law. Kirchhoff's laws. DC and AC circuit analysis techniques: node-voltage and mesh-current methods, source transformations, Thévenin and Norton equivalent circuits, and maximum power transfer. Self and mutual inductances. AC steady-state power calculations. Balanced three-phase circuits.

POWE 271 ELECTROMAGNETIC FUNDAMENTALS (3 Crs.: 3 Lec): Three-dimensional orthogonal coordinate systems: Cartesian, Cylindrical and Spherical. Vector Analysis: Gradient, Divergence and Curl of fields, Divergence theorem, Stokes's theorem. Fundamental Postulates of Electrostatics in free space, Coulomb's Law in space, Gauss's Law in space. Material Media: Conductors and Dielectrics, Polarization, Electric Flux Density. Boundary Conditions. Capacitors and Electrostatic Energy. Poisson's Equation, Laplace's Equation, Method of Images, Boundary Value Problems, Steady Electric Currents: conduction and convection currents, equation of continuity, boundary conditions for current density. Resistance and Power calculations. Fundamental Postulates of Magnetostatics in free space, Biot-Savart law in space, Ampere's Law in space. Magnetic materials: Magnetization, Inductance and Magnetostatic Energy. Magnetic circuit analysis. Introduction to Magnetic Forces and Torques. Time varying fields: Faraday's Law for Electromagnetic Induction (stationary circuit in a time-varying magnetic field, Transformers, moving circuit in steady and time-varying magnetic fields), Maxwell's Equations, Electromagnetic boundary conditions. **Pre-req.: PHYS 281.**

POWE 342 CONTROL SYSTEMS I (3 Crs.: 3 Lec): History and role of control systems. Transfer function models. Block diagram representation and reduction. Transient and steady-state response analyses. Root-locus analysis and design. Frequency-response analysis and design. Simulation using MATLAB. **Pre-req.: MATH 283, COME 214.**

POWE 342L CONTROL SYSTEMS LAB (1 Cr.: 2 Lab): This lab serves the POWE 342 course. **Co-req.: POWE 342.**

POWE 324 ELECTRICAL POWER SYSTEMS (3 Crs.: 3 Lec): Power networks structure. Overhead transmission lines: parameters, constants, performance, loadability and compensation. Insulators and corona effect. Mechanical design. Underground power cables. Distribution systems: design, equipment and layouts. Reactive compensation and power factor correction. **Pre-req.: POWE 271.**

POWE 324L ELECTRICAL POWER SYSTEMS LAB (1 Cr.: 2 Lab): This lab serves the POWE 324 course. **Co-req.: POWE 324.**

POWE 344 INSTRUMENTATION AND MEASUREMENT (3 Crs.: 2 Lec, 2 Lab): Measurement errors. Measuring elements. Analogue and digital measuring instruments: voltmeter, ammeter, power meter, and energy meter. Instrument transformers. Measuring amplifiers. Analogue and digital oscilloscopes. Measurement of electrical quantities. Measurement systems: sensors and transducers. Installation and calibration of instruments. **Pre-req.: MATH 381, COME 221.**

POWE 445 CONTROL SYSTEMS II (3 Crs.: 3 Lec): Modern control versus classical control. State-space representation of dynamic systems. Matrix algebra. Analysis of linear state equations. Equilibrium points and stability. Controllability and observability. State equations and transfer function matrices. Pole-placement design. Simulation using MATLAB. *Pre-req.: POWE 342.*

POWE 435 ELECTRIC MACHINERY I (3 Crs.: 3 Lec): History of Electric Machinery. Magnetic circuits. Principles of energy conversion. Single-phase transformers: construction, theory of operation, equivalent circuit, power flow, regulation and testing, autotransformer, tap-change transformer. Three-phase transformers: connections, per-unit equivalent circuit and special connections. DC Machines: construction, theory of operation, armature reaction and commutation, induced voltage, developed torque and equivalent circuits for separately excited, series, parallel and compound DC generators and DC motors, starting methods of DC motors. PMDC motors and brushless DC motors: construction, theory of operation and applications. Introduction to DC motor drives. *Pre-req.: POWE 271.*

POWE 435L – ELECTRIC MACHINERY I LAB (1 Cr.: 2 Lab): This lab serves the POWE 435 course. *Co-req.: POWE 435.*

POWE 423 ELECTRICAL POWER SYSTEM ANALYSIS (3 Crs.: 3 Lec): Power system modeling. Per-unit systems. Power flow analysis. Network stability analysis. Balanced faults. Symmetrical components and short circuit analysis. Introduction to economic dispatch and control of generation. Use of power system simulation packages. *Pre-req.: MATH 284, POWE 324.*

POWE 433 POWER ELECTRONIC CIRCUITS I (3 Crs.: 3 Lec): Introduction to power switches: diode, thyristor, triac, diac, GTO, BJT, MOSFET, IGBT, characteristics, modes of operation, selection of switches, firing circuit design and application, analysis and design of suitable circuits and subsystems for practical applications such as dimmer circuit and dc motor control circuit, calculation of switching losses, evaluation of THD and associated power losses. Rectifying circuits: single-phase and three-phase, uncontrolled, half-controlled and fully-controlled rectifiers for different types of passive loads, evaluation and demonstration of steady state voltages and currents, calculation of efficiency, PF and THD of such converters. Circuit analysis software such as PSIM, PROTEUS or MATLAB. *Pre-req.: COME 221.*

POWE 433L POWER ELECTRONIC CIRCUITS LAB (1 Cr.: 2 Lab): This lab serves the POWE 433 course. *Co-req.: POWE 433.*

POWE 436 ELECTRIC MACHINERY II (3 Crs.: 3 Lec): Three-phase AC machines: winding connections, rotating magnetic field theory, three phase induced voltages and torque. Three-phase induction motors: construction, theory of operation, equivalent circuit, power flow and regulation, starting and testing, torque speed analysis. Synchronous generators and motors: construction, theory of operation, induced voltage, equivalent circuit, voltage regulation, electrical and mechanical diagrams, and parallel operation. Single phase induction motor: construction, theory of operation, equivalent circuit, different types of starting methods and applications. Variable reluctance machines: switched reluctance, synchronous reluctance, and stepper motor. Hysteresis motor. Linear machine: induction, synchronous reluctance. Universal motor: construction theory of operation. *Pre-req.: POWE 435.*

POWE 436L ELECTRIC MACHINERY II LAB (1 Cr.: 2 Lab): This lab serves the POWE 436 course. *Co-req.: POWE 436.*

POWE 420 ELECTRICAL POWER SYSTEM PROTECTION (3 Crs.: 3 Lec): Protective relaying fundamentals, relay and switchgear characteristics, over-current relays. Zone of protection. Reclosers and fuses. High voltage distance protection and carrier schemes. Differential relays. Protection of generators, motors, transformers, and busbars. Relay coordination. *Pre-req.: POWE 423.*

POWE 420L ELECTRICAL POWER SYSTEM PROTECTION LAB (1 Cr.: 2 Lab): This lab serves the POWE 420 course. *Co-req.: POWE 420.*

POWE 434 POWER ELECTRONIC CIRCUITS II (3 Crs.: 3 Lec): Single and three phase AC voltage controllers for different types of loads. Introduction to induction motor speed control and static VAR control. DC to DC converters: linear voltage regulation, design consideration for buck, boost and cuk converters, modes of operation, effect of ripples, single, two and four-quadrant operation of DC motor speed control, design of buck-boost circuit for PV panels. Single phase and three phase inverters: square wave inverter, Fourier analysis

and THD calculation, single phase and three phase multilevel inverter, bipolar and unipolar PWM technique, voltage control through pulse amplitude and PWM techniques, three phase PWM inverter and induction motor application. Circuit analysis software such as PSIM, PROTEUS or MATLAB. **Pre-req.: POWE 433.**

POWE 500 RESEARCH METHODOLOGY (2 Crs.: 2 Lec): Why to Conduct Scientific Research, Stepping in: Research Methodology, formulating a research problem, conceptualizing a research design, constructing an instrument for data collection, selecting samples, writing a research proposal, collecting data, processing & displaying data, writing a research report. Conducting Scientific Research at the faculty of Engineering. **Pre-requisite: ENGL 300**

POWE 543 INDUSTRIAL AUTOMATION (3 Crs.: 3 Lec): Automation and the economy. Hardwired logic versus programmable logic. Control system components. Industrial motor control: starting, braking, reversal, and sequencing. Introduction to programmable logic controllers. PLC hardware and memory organization. Ladder logic. Sequential and combinational logic instructions. Timers and counters programming. Data manipulation instructions. Math instructions. Installation practices and troubleshooting. **Pre-req.: COMP 208, POWE 344.**

POWE 543L INDUSTRIAL AUTOMATION LAB (1 Cr.: 2 Lab): This lab serves the POWE 543 course. **Co-req.: POWE 543.**

POWE 531 ELECTRIC DRIVES (3 Crs.: 3 Lec): History of electric drives and their elementary components, types of loads and dynamics of motor load combination, thermal limitation, considerations and classification of electric motors, analysis of different types of duties in drive systems, load cycle and motor rating selection of electric motors, steady-state stability of an electric drive. DC series, shunt, separately excited, characteristics curves with classical methods of speed controls (resistance, voltage and field control), design of chopper fed DC drives, first, second and fourth quadrant drive. Induction motor drives: performance and characteristics of classical drives (rotor resistance, supply voltage and supply voltage-frequency), modern drives (rotor injected voltage, slip power control, slip power recovery, stator voltage-current and frequency control), modern and classical methods for starting and braking of induction motors, industrial applications of electric drives. **Pre-req.: POWE 434, POWE 436.**

POWE 531L – ELECTRIC DRIVES LAB (1 Cr.: 2 Lab): This lab serves the POWE 531 course. **Co-req.: POWE 531.**

POWE 528 – ELECTRICAL POWER GENERATION (3 Crs.: 3 Lec): Overview of thermodynamics. Characteristics and operation of thermal units. Introduction to optimization techniques. Economic dispatch of thermal units and methods of solution. Unit commitment and forward dynamic programming. Generation with limited energy supply. Hydrothermal coordination. Demand forecast and reliability of generation. **Pre-req.: POWE 436.**

POWE 526 INTRODUCTION TO RENEWABLE ENERGY (3 Crs.: 3 Lec): Modeling, analysis, design, construction, efficiency and application of photovoltaic and wind energy systems. Introduction to fuel cells and hydrogen cycle. Introduction to business and career opportunities in renewable energy. **Pre-req.: POWE 434, POWE 436.**

POWE 501 FINAL YEAR PROJECT I (1 Cr) / POWE 502 FINAL YEAR PROJECT II (3 Crs): After completing 120 credits of course work, the student becomes eligible to sign up for the Final Year Project (FYP) that extends over two semesters; beginning in Fall-semester and ending in the following Spring-semester. The FYP experience requires students to work in teams to complete a specific project, submit a technical report, and give a presentation on a significant, relevant, and comprehensive engineering problem. The FYP is intended to stimulate student creativity and critical thinking and build skills in formulating, designing, developing, building, communicating, and managing engineering projects. The project aims to provide students with a transitional experience from the academic world to the professional world. **Pre-req.: ENGR003, Co-req.: POWE500.**
Refer to the Final Year Project Policy for more details.

POWE 499 INTERNSHIP (1 Cr): This is a professional training which should not be less than four weeks. The training is followed by a presentation session where the students are supposed to present what they have learned. *Refer to the department policy for further details.*

C. Electrical Power and Machines Engineering Technical Electives

The EPME curriculum includes two 12-credit hours as technical electives. The courses are chosen from the courses listed in the table below, with their descriptions given thereafter.

Course	Title	Credits	Pre-/Co-requisites
POWE 428	Electrical Design in Commercial and Industrial Buildings	3	Pre: POWE 324
POWE 444	Digital Control	3	Pre: POWE 445
POWE 522	High Voltage Engineering	3	Co: POWE 420, POWE 423
POWE 533	Specialized Modes of Machine Operation	3	Pre: POWE 436
POWE 523	Power System Planning	3	Pre: POWE 423
POWE 534	Advanced Topics In Power Electronic Circuits	3	Pre: POWE 434
POWE 524	Power System Control and Operation	3	Pre: POWE 445, POWE 423
POWE 536	Solid-State Drives	3	Pre: POWE 434
POWE 529	Wind Energy Systems	3	Pre: POWE 434, POWE 436

Description of Technical Elective Courses

POWE 428 ELECTRICAL DESIGN IN COMMERCIAL AND INDUSTRIAL BUILDINGS (3 Crs.: 3 Lec): Load characteristics. Local distribution grid. System design and analysis. Wiring for residential and industrial buildings. Hazards in industry and electrical safety considerations. Power quality of utility and building systems. Building Management Systems. Illumination. **Pre-req.: POWE 324.**

POWE 444 DIGITAL CONTROL (3 Crs.: 3 Lec): Introduction to digital control. Difference equations. The z-transform. Time-response and frequency-response of discrete-time systems. Sampling theorem. Modeling of digital control systems. Stability analysis. z-domain root locus. z-domain design. Differencing methods. Pole-zero matching. Bilinear transformation. Frequency-response design. Direct control design. **Pre-req.: POWE 445.**

POWE 523 POWER SYSTEM PLANNING (3 Crs.: 3 Lec): Short and long term load forecasting. Power system expansion planning: transmission and distribution. Generation and transmission reliability analysis. Outage simulation and optimum reliability level. Estimation of outage costs: residential and industrial. Power system security. **Pre-req.: POWE 423.**

POWE 524 POWER SYSTEM CONTROL AND OPERATION (3 Crs.: 3 Lec): Control problems in interconnected power systems. Modelling power system components and dynamic simulation. Excitation control systems. Q-V control channel. Generation control systems. P-f control channel. Review of energy management systems. Real time modelling: the SCADA system, system security, monitoring and control. **Pre-req.: POWE 445, POWE 423.**

POWE 533 SPECIALIZED MODES OF MACHINE OPERATION (3 Crs.: 3 Lec): Induction machine modes of operation: generation, plugging and braking, unbalanced operation. Induction regulator: single and three-phase, Selsyns and Synchronos. Unsymmetrical operation of two-phase induction motor. AC tachogenerator. **Pre-req.: POWE 436.**

POWE 534 ADVANCED TOPICS IN POWER ELECTRONIC CIRCUITS (3 Crs.: 2Lec, 2 Lab): Twelve-pulse converters. Switching mode power supplies. Current source inverters. Switching and conduction losses in power switches. Cooling of switching devices. Introduction to Protection of power switches. Induction furnace. Harmonic analysis. Active power filters. Multi-level inverters. **Pre-req.: POWE 434.**

POWE 536 SOLID STATE DRIVES (3 Crs.: 3 Lec): DC drives: ac to dc converter drives, dc to dc converter drive, coordinated control, performance. AC drives: ac voltage controller drives, slip energy recovery, inverter fed drives. Vector controlled induction machines. Simulation using MATLAB/SIMULINK. **Pre-req.: POWE 434.**

POWE 522 HIGH VOLTAGE ENGINEERING (3 Crs.: 2 Lec, 2 Lab): Introduction to high voltage engineering. Generation of testing signals and measurements. Electric breakdown mechanisms. Bus bar arrangement and system grounding. Surge arresters and insulation coordination. Traveling waves and Lattice diagram. Transient analysis. HV circuit breakers and switchgears. Protection against lightning. **Co-req.: POWE 420, POWE 423.**

POWE 529 Wind Energy Systems (3 Crs.: 3 Lec): Revision of wind energy system types, operation, modeling and analysis. Wind speed and sites for wind energy generation. Comparison and study of common wind turbine types. Analysis of power electronic circuits used in wind energy systems. Vector analysis of synchronous and induction machines. Operation, stability, control and protection of types one, two, three and four of wind turbines. Problems and challenges associated with the stability of wind energy systems. **Pre-req.: POWE 434, POWE 436.**

Study Plan

Bachelor of Engineering in Electrical Power and Machines Engineering (150 Credits)

First Semester (16 credits)		Crs.	Pre/Co-requisites
MATH 281	Linear Algebra	3	Pre: MATH 112
MATH 282	Calculus	3	Pre: MATH 111
PHYS 282	Material Properties and Heat	3	
CHEM 241	Principles of Chemistry	3	Pre: CHEM 110
ENGR 002	Introduction to Engineering	2	
	General Elective	2	

Second Semester (17 credits)		Crs.	Pre/Co-requisites
POWE 212	Electric Circuits I	3	
MATH 283	Differential Equations	3	Pre: MATH 281, MATH 282
PHYS 281	Electricity and Magnetism	3	Pre: PHYS 120
MCHE 213	Dynamics	3	
MATH 381	Probability and Statistics	3	Pre: MATH 282
CHEM 405	Solid-State Chemistry	2	Pre: CHEM 241

Summer I (8 credits)		Crs.	Pre/Co-requisites
ARAB 001	Arabic Language	2	
ENGL 001	General English	2	
	General Elective	2	
	General Elective	2	

Third Semester (17 credits)		Crs.	Pre/Co-requisites
COME 214	Electric Circuits II	3	Pre: POWE 212
COME 212L	Electric Circuits Lab	1	Co: COME 214
MATH 284	Numerical Analysis	3	Pre: MATH 283
POWE 271	Electromagnetic Fundamentals	3	Pre: PHYS 281
COME 221	Electronic Circuits I	3	Pre: POWE 212
COME 221L	Electronic Circuits Lab	1	Co: COME 221
COMP 225	Digital Systems I	3	

Fourth Semester (17 credits)		Crs.	Pre/Co-requisites
POWE 342	Control Systems I	3	Pre: MATH 283, COME 214
POWE 342L	Control Systems Lab	1	Co: POWE 342
POWE 324	Electrical Power Systems	3	Pre: POWE 271
POWE 324L	Electrical Power Systems Lab	1	Co: POWE 324
POWE 344	Instrumentation and Measurement	3	Pre: MATH381, COME 221
COMP 326	Intro. to Microprocessor with Applications	3	Pre: COMP 225
COMP 326L	Intro. to Microprocessor with Applications Lab	1	Co: COMP 326
ENGL 211	Advanced Writing	2	Pre: ENGL 001

Summer II (8 credits)		Crs.	Pre/Co-requisites
ENGR 001	Engineering Ethics	1	
BLAW 001	Human Rights	1	
MGMT 002	Entrepreneurship I	2	
ENGL 300	Speech Communication	2	Pre: ENGL 211
	General Elective	2	

Fifth Semester (17 credits)		Crs.	Pre/Co-requisites
POWE 445	Control Systems II	3	Pre: POWE 342
POWE 435	Electric Machinery I	3	Pre: POWE 271
POWE 435L	Electric Machinery I Lab	1	Co: POWE 435
POWE 423	Electrical Power System Analysis	3	Pre: MATH 284, POWE 324
POWE 433	Power Electronic Circuits I	3	Pre: COME 221
POWE 433L	Power Electronic Circuits Lab	1	Co: POWE 433
INME 221	Engineering Economy	3	

Sixth Semester (17 credits)		Crs.	Pre/Co-requisites
COMP 208	Programming I	3	
POWE 436	Electric Machinery II	3	Pre: POWE 435
POWE 436L	Electric Machinery II Lab	1	Co: POWE 436
POWE 420	Electrical Power System Protection	3	Pre: POWE 423
POWE 420L	Electrical Power System Protection Lab	1	Co: POWE 420
POWE 434	Power Electronic Circuits II	3	Pre: POWE 433
ENGR 003	Engineering Project Management	3	Pre: ENGL 300

Seventh Semester (18 credits)		Crs.	Pre/Co-requisites
POWE 543	Industrial Automation	3	Pre: COMP 208, POWE 344
POWE 543L	Industrial Automation Lab	1	Co: POWE 543
POWE 531	Electric Drives	3	Pre: POWE 434, POWE 436
POWE 531L	Electric Drives Lab	1	Co: POWE 531
POWE 499	Internship	1	
POWE 500	Research Methodology	2	Pre: ENGL 300
POWE 501	Final Year Project I	1	Pre: ENGR 003, Co: POWE 500
	Technical Elective	3	
	Technical Elective	3	

Eighth Semester (15 credits)		Crs.	Pre/Co-requisites
POWE 528	Electrical Power Generation	3	Pre: POWE 436
POWE 526	Introduction to Renewable Energy	3	Pre: POWE 434, POWE 436
POWE 502	Final Year Project II	3	Pre: POWE 501
	Technical Elective	3	
	Technical Elective	3	

Courses offered to other majors

The EPME program offers two courses for other engineering majors. These courses are described below.

POWE 211 ELECTRIC CIRCUITS (for mechanical engineering students) (3 Crs.: 3 Lec): Circuit variables. Ohm's law. Kirchhoff's laws. Series and parallel resistors. Voltage and current divider circuits. Delta-to-Wye transformation. Node-voltage and mesh-current methods. Thevenin equivalent circuit. Operational amplifiers. Sinusoidal steady-state analysis and power computations. Balanced-three phase circuits. Active filter circuits. **Pre-req.: PHYS 281.**

POWE 335 ELECTRIC DRIVES (for mechanical engineering students) (2 Crs.: 2 Lec,): DC motors, DC motor drives, single-phase and three-phase induction motors, induction motor drives, synchronous motors, stepping motors, universal motor, switched-reluctance motors. **Pre-req.: MCHE 214, Co-req.: MCHE 414.**

Elective University Requirement Course

The EPME program offers one course as General (University) Elective. The course is described below.

POWE 001 ELECTRIC SAFETY (2 Crs.: 2 Lec): Hazards of electrical installations. Safety requirements. Recognition, evaluation and controlling electrical hazards. Physiological effects of electrical current. Good wiring practices. Color coding and grounding. Load calculation. Selecting proper overcurrent protective devices. Children protection. Emergency systems. Fire alarm systems.
